

About the Position

Role: Software Engineering

Designation: Gen AI Trainee/Intern

Experience: 0 years

Location: Gurgaon

Education: Bachelor's degree in computer science or related fields (Technical)

Industry Type: SaaS/ Agentic AI

Salescode Introduction

Founded by Ex Coca Cola business leaders, Salescode is the NextGen AI Platform for "**Future Ready Sales Team and Trade**" with AI and eB2B for CPG Industry.

Salescode is possibly the only Enterprise SaaS platform that guarantees a **minimum Sales Uplift of 3%**. We promise to pay a penalty with a 110% refund if we do not deliver!!

With **3M+ Users across 12 countries**, we are already working at scale with top global companies like **CocaCola, ITC, PepsiCo, Colgate, Johnson & Johnson, P&G, Mondelez, MARS, Reckitt, Perfetti, BATA, Pladis** and others.

Salescode Company and Product Collaterals

Product Overview:

- **SCAI** - The **world's first Voice AI Agent** that can talk to millions of retailers simultaneously—autonomously taking orders, upselling, and nudging promotions, more effectively than a human - [Agentic AI](#)
- **SFAI** - An AI-powered [SFA](#) that drives the Competency & Behaviour of each Sales Reps for each call to provide a Guaranteed Sales Uplift,
- **Next-Gen eB2B** - Connect Retailers/Trade Partners via an [eB2B](#) app with Hyper Personalized Engagements
- **Next-Gen DMS** - Increase Sales, Reduce Cost, and Manage Distributor's Working Capital with AI DaaS

- World's First Experience Centre for "Future Ready Sales Team and Trade" for CPG Sales - [Salescode Experience Centre](#)

About the Role

Salescode.ai is building the future of intelligent sales agents—and we're looking for a **Software Engineer** who thrives on solving hard engineering problems and writing exceptional code. In this role, you'll be instrumental in developing **production-grade, scalable systems**.

While prior GenAI experience is a bonus, we care more about **strong backend/full-stack problem solvers** who are excited to build next-gen AI systems from scratch and ship **scalable Agentic AI products**

Important: This role is *not* for candidates who build GenAI agents using plug-and-play tools alone (drag-and-drop builders, etc.). We're looking for engineers who **deeply understand system architecture, LLM workflows, reasoning pipelines, and can build the stack—not just stitch it together**.

Key Responsibilities

- Contribute to the development of **Agentic AI systems**, including co-pilots, chatbots, and tool-using autonomous agents.
- Work with senior engineers to build and maintain backend components and APIs that power **real-time AI products**.
- Integrate tools like **LlamaIndex, LangChain**, and **vector search** systems into production applications.
- Assist in deploying and optimizing AI agent pipelines using **AWS, Azure**, or other cloud environments.
- Collaborate with cross-functional teams including ML engineers, product managers, and designers to turn ideas into working software.
- Write clean, maintainable code and participate in code reviews, testing, and documentation efforts.

Bonus Skills (Nice to Have, Not Mandatory)

- Prior experience building or integrating GenAI/LLM products (RAG, Co-pilots, Chatbots, etc.).
- Knowledge of voice tech: ASR (speech-to-text), TTS, persona design, or audio streaming.
- Familiarity with MLOps tools (MLFlow, W&B) and modern data stack (Delta Lake, Lakehouse, etc.).
- Exposure to open-source LLMs, LoRA fine-tuning, or model optimization techniques

Why Join Salescode

- Work on **cutting-edge Agentic AI applications** - not slide decks or POCs.
- Collaborate with global brands and CXOs to build **high-impact, scalable AI systems**.
- Be part of a high-performing, fast-growing, product-obsessed team.
- Gain massive **ownership, impact, and upside**—with **performance-linked ESOPs**.

You Might Be a Fit If You:

- Have **proven expertise** in backend or full-stack software development (Python or Java preferred)
- Are curious about **Agentic AI**, autonomous agents, and intelligent systems—even if you're just getting started.
- Have worked on at least one end-to-end **production-level project**, ideally involving APIs, cloud deployment, or data pipelines.
- Are a strong individual contributor who's eager to learn, take ownership, and grow within a fast-moving product team.
- Are excited about building **real-world AI-powered products**, not just POCs or demos.

What's on Offer

1. Opportunity to work with top professionals and experts in a mission mode, to lead and contribute to the creation of a Global company.
2. Create value for the customers, engage with top Global brands and CXOs, and help them experience the Future of Sales.
3. Be a part of Wealth Creation and earn extraordinary financial benefits as a part of the ESOP plan, specially designed for high performers
